

COSC 435 Group 18 Proposal

Group Members: Camila Gallardo, James Meegan, Eromonsele Okojie

Small Description:

We will be creating an app that will help users in the management of their food- specifically for reminding users when an item is close to expiring.

User Stories:

As a User, I want to be notified when a food item is close to expiring.

As a User, I want to be able to add, update, and delete any food items in my current inventory.

As a User, I want to be able to filter my food inventory based on whether items are perishable or non-perishable.

As a User, I want to be able to quickly search up certain foods by typing in the name of the item.

As a User, I want my food inventory to be properly stored in the app and always be there when the app loads.

As a User, I want to be able to access my account across multiple devices.

As a User, I want to be able to create an account so that I can save my food inventory.

As a User, I want to be able to use the app as a grocery list and a note-taker, so that I can easily add items to my shopping list or make notes about my food inventory.

As a User, I want to be able to scan barcodes to fill in information when adding a new item.

As a User, I want to be able to access a settings page to change how I view my app.
